The authors, editors, and publisher have exerted every effort to ensure that drug selection and dosage, as well as the description of instruments and recommendations for their use, set forth in all articles appearing in the *Journal of Clinical Monitoring* are in accord with current recommendations and practice at the time of publication. However, many considerations necessitate caution in applying in practice information reported in any article appearing in the *Journal*. These include ongoing research, changes in government regulations, variations in standards among different countries, the possibility that original research as reported in the *Journal* may differ from standard practice, and the constant flow of information relating to drug therapy and drug reactions, as well as the principles of monitoring, application of instruments, and differences in instruments among manufacturers. The reader is advised to check the package inserts for each drug for change in indication and dosage, and the descriptions provided by instrument manufacturers for added warnings and precautions. This caution is particularly important when the recommended drug or instrument is new or infrequently employed.

The *Journal of Clinical Monitoring* is indexed in *Index Medicus, Current Contents/Clinical Practice, Excerpta Medica,* and *Current Awareness in Biological Sciences.*
